

# Research Methods and Statistics in Psychology

## Errata

- On p.71.9 **classes** should read **classes'**
- On p.123 1.14 **participants'** should read **participant's**
- On p.314 Discussion question (d) should read **What problems of data analysis are encountered in studies in which two or more independent variables have two or more levels?**
- On p.461 the ticks and crosses for the first four items are the wrong way round. Down the page, this should read **x ✓ x ✓ x not ✓ x ✓ x x**.
- In the presentation of the sample lab report (pp.469-476), the placement of the page breaks may confuse students who try to imitate this report.

As indicated on pp. 464 and 465, the only essential breaks are between

- (a) the Title page and the Abstract,
  - (b) the Abstract and the start of the Introduction,
  - (c) the end of the Discussion and the References, and
  - (d) the References and the Appendices.
- On pp. 464 and 465, **Title** and **Figure 1 Figure caption** should be in `courier` font.
